

## Cerebrovascular and Nervous System Checkup

NT\$ 82,026

| Category  | Item  | Description  |
|---|---|--|
| Magnetic Resonance Imaging(MRI)                 | MRI for Cerebrovascular Arteries                | Head and neck imaging, including intra- and extra-cranial arteries, an early detection for stroke, carotid artery disease and intracranial aneurysm ect.   |
|   | Head & Neck MRI                                 | Including cerebrum, cerebellum, brain stem, orbit, nasopharynx, ears and neck.   |
| Carotid Ultrasound                              | Carotid Ultrasound                              | An early detection for carotid artery disease ect.   |
| Autonomic Nervous System Test                   | Autonomic Nervous System Test                   | HRV (Heart rate variability), for evaluation of autonomic nervous system.  |
| Nerve Conduction Velocity (NCV)                 | Nerve Conduction Velocity (NCV)                 | Nerve conduction velocity (NCV) to provide adequate peripheral nervous system and objective assessment.  |
| Cognitive Abilities Screening Instrument (CASI) | Cognitive Abilities Screening Instrument (CASI) | Cognitive Abilities Screening Instrument , an early detection for Dementia.  |
| Blood Lipid Profile & Homocysteine              | Blood Lipid Profile & Homocysteine              | Examine the risk factors of cerebrovascular accidents such as total cholesterol (T. Cholesterol), triglyceride (TG), high-density lipoprotein cholesterol (HDL-C), low-density lipoprotein cholesterol (LDL-C), TC/HDL-C and high sensitivity C-reactive protein (HS-CRP). |
